Microchip may have seen the CTS as a necessary augment to sell the SPO which they liked enough as a product to invest time and money to develop the CTS algorithm, or more economically purchase it from someone who had created a good algorithm

Neither. It uses the public domain algorithm developed by the US Naval Laboratories.

In other fun speech news, the full source for DECTalk was made available a while back:

<https://github.com/dectalk/dectalk>
