From this picture https://upload.wikimedia.org/wikipedia/commons/9/9f/ISA_Bus_ pins.svg Which one is the ISA bus clock? B20 or B30?

Also from http://www.hardwarebook.info/ISA it shows ALE high at the clock cycle low, but from my measurements, my ALE behave very differently from what they show in the 8 Bit Memory or I/O Transfer Timing Diagram (4 wait states shown). So before I do something irreversible... I had to ask.
